DETAILED ACTION

1. Claims 1-4 are pending and under consideration.

Priority Statement

2. The status of applications in the priority statement at the beginning of the Specification should be updated.

Drawings

3. The drawings submitted 9March2004 have been declared informal.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 1-4 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-3 and 16 of U.S. Patent No. 6,827,936 in view of Gombotz et al (U.S. Pat. No. 5,019,400). Although the conflicting claims are not identical, they are not patentably distinct from each other because: 1) both sets of claims are drawn to immunogenic compositions comprising the same amino acid sequence peptides and structures, and 2) claims 1-4 of the instant application also comprise a biocompatible microparticle. The microparticles of the instant claims are not required to be attached to or made part of the peptides, but simply present in the composition. Both sets of claims recite "an immunogenic

Art Unit: 1645

composition comprising". The open language encompasses any constituents in addition to the recited amino acid sequence peptide structures.

Gombotz et al teach the production of microparticles incorporating any peptides for the purpose of controlled release of the peptides to increase the immunogenicity of the peptides.

The instant claims do not require that the microparticle be attached to or made part of the peptides, but simply be present in the composition. Thus, in view of Gombotz et al who teach microparticles to be added to immunogenic compositions of peptides or which incorporate the peptides, the instant claims which comprise microparticles do not patentably distinguish the instant claims from the claims of U.S. Pat. No. 6,827,936 because the claims fall under obviousness-type double patenting.

Conclusion

6. No claims are allowed.
